

AMAGRIT®

The Ervin technology for stainless steel abrasives is the most advanced worldwide. The Ervin production in Sprockhövel, Germany, combined with the knowledge of our technology centre in Tecumseh, U.S.A., makes AMAGRIT one of the highest quality martensitic stainless grits.

Continuous quality control, in combination with the cutting-edge production process, guarantees consistently high performance.

AMAGRIT is ideal for:

- Automatic wheel blast machines
- Air blast systems
- Surface preparation for coating
- Surface cleaning
- Surface finishing
- Replacement of Aluminium Oxide

Example applications:

- Welded stainless steel structures (engineering)
- Granite, natural stone and precast concrete parts
- Aluminium profiles prior to coating
- Stainless steel forgings

Key benefits:

- Lowest consumption
- Highest productivity, lowest cost
- Significant savings vs. mineral abrasive
- Reduced dust & waste disposal
- Rust-free and clean surfaces
- Local technical support

AMAGRIT®

Chemical Analysis

C ≈ 2.2%
 Mn..... ≈ 1.3%
 Si ≈ 2.6%
 Cr 25 - 30%

Hardness

New material. ≈ 675 HV (58 HRC)
 Operating mix ≈ 720 HV (61 HRC)

Microstructure

Martensite / Chromium carbides

Density

≥ 7.3 g/cm³

Packaging

500 kg Euro pallet with
 20 poly bags x 25 kg
 1 tonne Big Bag
